

Jake Jazokas

Senior Software Engineer | Technical Lead

Summary

Software developer and technical leader specializing in transforming startup concepts into scalable, production-ready systems. Experienced in building mobile applications and distributed microservices, delivering reliable solutions under high-load conditions. Proven track record of leading teams, integrating complex systems, and launching products from zero to production.

Technical Skills

Programming Languages

Python • Java • C • Go • SQL • Perl • JavaScript • TypeScript

Frameworks & Libraries

Gin • OpenCV • TensorFlow • Keras • Django • Flask • Node.js • Vue.js • Swing • RCP

Cloud & DevOps

Kubernetes • Docker • GCP (*GKE, Cloud SQL, Cloud Run*) • CI/CD (*ArgoCD, Drone, Jenkins*)

Testing & Quality Engineering

Robot Framework • Selenium • Playwright • Cucumber

Leadership & Compliance

Agile • Jira • iGaming Compliance (*KYC, RG Limits, AML*) • GDPR Compliance

Databases

PostgreSQL • MongoDB • Firebase

Mobile Development

Flutter • Swift • Android

Integration Architecture & API Design

Microservices Architecture • Headless • API-First • Event-Driven Systems (*Kafka*) • RESTful APIs • WebSockets

Work Experience

Full Stack Software Developer

Green Brick Labs, Waterloo, Ontario

November 2024 – Present

- Designed and delivered full-stack features for a regulated iGaming platform using Golang and Vue.js within a microservices architecture, contributing to rapid product delivery
- Led development of an international cryptocurrency-based casino platform, delivering full-stack features, payment integrations, and scalable services to support a global user base
- Owned end-to-end delivery, including CI/CD pipelines, build systems, and deployment workflows, for a Flutter-based Android application
- Led performance optimization initiatives, reducing page load times from 3–10 seconds to sub-second latency through backend and frontend improvements
- Diagnosed and resolved memory leaks across distributed services, improving system stability and maintaining 99.9% uptime
- Contributed to redesigning a legacy monolithic iGaming system into a cloud-native, microservices, event-driven platform, improving throughput by 70% and enabling near real-time processing for 99% of transactions
- Delivered critical integrations under tight deadlines, including a last-minute payment provider integration to support go-live requirements, enabling the processing of over \$100M in transactions
- Built internal dashboards and analytics tooling to support operational monitoring and financial reporting
- Developed, validated, and submitted regulatory reports to AGCO and iGaming Ontario, ensuring data accuracy, compliance, and timely delivery of required gaming and financial reporting

Chief Technology Officer (Hands-on / Startup)

WorldBuddy Travel, Mermaid, Prince Edward Island

May 2022 – November 2024

- Led the engineering team in building Flutter-based iOS and Android apps with native Swift and Java integrations, using Agile methodology to optimize delivery and collaboration
- Defined technical roadmap and system architecture to support product growth and scalability, driving adoption of microservices, optimizing data flows, and improving deployment and reliability practices
- Established a co-op program and provided supervision and mentorship to a team of developers from Carleton University
- Collaborated with stakeholders to ensure the timely and budget-compliant implementation and distribution of products in compliance with GDPR
- Scaled the engineering team from a single developer to a multi-team structure spanning multiple disciplines, growing the company to 8 members and establishing foundational hiring, onboarding, and development processes

Software Developer

Ross Video, Ottawa, Ontario

April 2019 – December 2020

- Developed cross-platform frameworks and libraries that enhanced automated regression and performance testing across several different product lines
- Designed the architecture for scalability testing of a web application using AWS instances, JMeter, and Selenium Grid
- Built automated environment provisioning tools, significantly reducing developer setup time and improving onboarding efficiency

Teaching Assistant

Carleton University, Ottawa, Ontario

September 2018 – December 2021

- Held weekly office hours and tutorials to assist students with core concepts in object-oriented programming, data structures, operating systems, and introduction to computer science classes

Software Developer

A² Consulting, Brampton, Ontario

April 2017 – August 2017

- Automated unit test execution using Perl scripts to improve code robustness and encourage CI principles for developers
- Developed interfaces to efficiently query, parse, and manipulate data from large SQL databases, enabling testers with real-time insights to identify and diagnose bugs

Education

Carleton University - Bachelor of Computer Science, Honours

Internet Security Stream, Co-op, Minor in Mathematics

June 2022

Ottawa, Ontario

Volunteer Experience

Computer Science Team Lead

Science Student Success Center, Carleton University, Ottawa, Ontario

September 2021 – April 2022

- Managed and delegated responsibilities for a team of 12 mentors, coordinating the planning and execution of workshops and large-scale events such as the Coding Challenge  for over 200 students

Treasurer

Sigma Pi Fraternity International, Ottawa, Ontario

January 2019 – January 2021

- Oversaw the creation and distribution of an annual budget of over CAD 30,000
- Created monthly financial reports and maintained financial accounts

Mentor

Science Student Success Center, Carleton University, Ottawa, Ontario

September 2018 – April 2021

- Provided personalized support and mentorship to students of diverse academic backgrounds. Improved their study habits, learning strategies, and awareness of various on and off-campus services available to support them
